

Floor Dry[®]

DRY FLOORS DIRECT

The trouble free floor system
against damp and mould

TG 0172/97
Patentnr. 500265

SITAC 

Floor Dry[®] against water damage, damp concrete, radon, emissions

Floor Dry® guarantees customer satisfaction

- We were back in action just two weeks after the flood. Really nice to avoid months of plastic sheeting.

With Floor Dry® we are able to restore floors immediately after water damage. The system dries the floor while you enjoy business as usual.

- It was the plastic carpet that caused the bad smell but now we are back in fresh premises again after only ten days.

Floor Dry® is such a safe system that we can guarantee the result even if you don't remove the damaged glue - saves you both time and money.

- Now the basement has fresh air and we can start using it as we first planned.

Floor Dry® takes care of damp concrete and mould equally efficiently on walls as on floors. No ventilated bases to maintain, only one small filter and a quiet fan.

Floor Dry® has been installed successfully since 1992. Among our customers you will find large companies like SKANSKA, Vasakronan, Riksbyggen, insurance companies and municipalities as well as house/tenement owners.

Floor Dry® succeeds where others fail!

? How?

A canalized membrane creates a distance between the damp concrete and the organic floor. Together with the FloorDry® spreading tube a completely sealed system is created. The air is taken in one corner through a filter and in the opposite corner a fan is connected. The air cannot take the shortest way to the fan and there is no risk for air whirls or dust-full ventilated bases. FloorDry® guarantees a problem free airflow in 100% of the surface.

FloorDry® is compatible with all types of floor construction. Thanks to its slender design - 5mm - it does not noticeably effect the original floor height. Mostly you don't even have to cut the doors. The mechanically ventilated system works equally well on floors, walls, ceilings and in wet rooms.

! It works!

The Floor Dry® method is approved by the Swedish SITAC and is regularly controlled by SP, Swedish National Testing and Research Institute. Every project is tested and documented in accordance with an approved quality system. Reference projects using Floor Dry® are found all over Sweden with a record from 1992, from small rooms to large buildings - always with the same outstanding result.

Floor Dry® succeeds where others fail!

+ Advantages

- * Floor Dry® gives guaranteed results.
- * Floor Dry® is based on simple physical laws.
- * Against damp, radon gas, indoor related issues.
- * Building height 5mm.
- * Compatible with all floor constructions.
- * Low energy fan - 40W - as a light bulb.
- * Quick installation.
- * Be back two weeks after water damage.
- * Competitive pricing.
- * Floor Dry® works in wet rooms.
- * Simple maintenance and monitoring.
- * Approved system.
